

Got Veneers today!!

Veneer preparation involves the removal minimal tooth structure. An impression is taken & sent to the lab to fabricate the custom veneers. Your dentist may or may not place temporary veneers on your teeth. Temporary Veneers are made of composite material. They are very fragile and are attached to the underlying tooth structure with temporary cement and can be easily dislodged.

If a veneer comes off, call us and we will replace it immediately. If you are in a situation that will not allow you to come in, place the temporary back in place with some Fixodent™ (denture adhesive) till you can come in. The size, shape, and color of the temporary do not resemble the final veneer.

Temporary veneers may leak saliva or food onto the tooth. Sensitivity to hot, cold, pressure or sweets is not uncommon. Temporary veneers also stain very easily. Avoid heavy brushing of the temporaries and do not floss between them because you may pull them off.

Your permanent porcelain veneers will be as close to the natural teeth as possible. Your Dentist may even send you for custom shading to closely duplicate your adjoining natural teeth.

Permanent porcelain veneers are bonded to your teeth using the finest materials. As with natural teeth; avoid chewing excessively hard foods on the veneered teeth (hard candy, ice, raw carrots, etc.) because the porcelain material can break under extreme forces.

Proper brushing, flossing, and regular 6-month (minimal) cleanings are essential to the long-term stability and appearance of your veneers. If not your gums may recede reveal the underlying discolored tooth structure requiring replacement of your veneers.

Please feel free to call us if you have any questions at **562.860.6626**
